ABSTRACT

The rate of ventilator-associated pneumonia (VAP) worldwide is still high. There is increasing concern that nurses do not receive sufficient education in their undergraduate courses on VAP-prevention guidelines. The purpose of this study was to investigate student nurses' knowledge of these guidelines; assessment of the level of knowledge is essential to provide evidence of the need to modify nursing curricula. A descriptive cross-sectional design was used in this study. A total of 434 participants from seven universities in Jordan completed a questionnaire that evaluated their knowledge about VAP-prevention guidelines. The participants demonstrated poor knowledge of the majority of topics in the questionnaire. The mean knowledge score was 6.4 out of 20 (SD=2.9). Participants who reported having been taught about VAP on their undergraduate courses achieved higher scores than those who had not: $t(432) = -3.5, p < 0.000$. However, both groups' scores were unsatisfactory. It is imperative that student nurses be knowledgeable about VAP-prevention guidelines, despite the gap in their education on this topic. Modification and updating of nursing curricula is indispensable to improve nurses' knowledge.

Purpose and Scope

The ERIC Thesaurus is a list of terms representing research topics in the field of education. Descriptors from the ERIC Thesaurus are assigned to every document in the ERIC digital library to describe its subject content.

Terms in the ERIC Thesaurus represent the vocabulary used in the documents that comprise the ERIC digital library collection. Learn more about how the Thesaurus is updated in this [archived webinar](#).

The ERIC Thesaurus contains a total of 11,721 terms. There are 4,520 Descriptors and 7,068 Synonyms. There are also 133 Dead terms which are no longer used as Descriptors but remain in the Thesaurus to aid in searching older records. The ERIC Thesaurus was last updated in October 2015. The updated Thesaurus includes 19 new Descriptors, 28 new Synonyms, and changes to 17 existing terms. For more information, view the [full list of updates](#) and [download the updated file](#).

摘要: This paper explores the issue of social justice through the lens of equitable access to **Advanced Placement** courses in the City of New York High Schools, with focus on **Advanced Placement** Environmental Science. A critical component of the **Advanced Placement** Environmental Science course is the incorporation of environmental fieldwork. The National Research Council (2014) suggest that field stations are important for STEM education and provide opportunities to engage students in the natural environment and get them excited about science. Through the Curriculum and Community Enterprise for Restoration Science, an NSF funded opportunity, students in the **Advanced Placement** Environmental Science course are integrating their field station work in Oyster Restoration in the New York City Harbor. These interactions with the environment offer unique experiences which engage marginalized students in both rigorous coursework and affords equity in science learning. In turn, it affords all students the opportunity for upward mobility and increased career opportunities in the area of STEM.
